

Module 3 Wrap-Up Summary

This document summarizes the key concepts covered in the wrap-up video of Module 3 from the Google Cloud Data Analytics Certificate course.

Key Concepts

Data Management: Understanding how data is handled throughout a project, including storage, processing, and governance.

Data Teams and Cycles: Exploring how data teams collaborate and how data moves through various stages in a project lifecycle.

Data Security: Ensuring data is protected from unauthorized access and breaches.

Retention and Deletion Policies: Defining how long data is kept and when it should be securely deleted.

Data Lifecycle Stages: Recognizing the phases data goes through from creation to archival or deletion.

Automation: Using tools and scripts to streamline data processes and improve efficiency.

Versioning and Holds: Maintaining accurate data versions and preventing accidental deletion through policy enforcement.

Congratulations on completing Module 3! You've made great progress in your journey into the field of data analytics. Keep up the great work!
